Two amazing PowerPoint add-ins by William Zafaran

CornerRadius

At last, someone has sorted out rounded corners properly. As we all know, in PowerPoint you have to adjust the corner radius by eye, which is ridiculous and makes this technique far too time-consuming to use in design. Now, though, there's an elegant solution: the CornerRadius add-in by William Zafaran. Essentially, it lets you set exact point values for corner radii. There's a free version and a Pro version. Pro is a bit more convenient, but the free one does the job perfectly well. Go and get it now; it's a game changer.

SVG Bridge

This add-in lets you paste SVG code directly as graphics. It's not something I personally have much use for, but it's still a brilliant idea, and the implementation is excellent. It'll be a lifesaver for anyone copying SVGs from Adobe Illustrator and similar stuff. It comes in both free and Pro versions.

P.s. Both add-ins have macOS and Windows versions.
