DCAPM+ Concept and Development Phases Deck

DCAPM+

Conceptual Architecture and Platform Development Phases

© 2024 I-COM SOLUTIONS LLC

Our advantages and differentiators

A product for database control and protection

A universal platform for controlling and protecting application assets

Technological partnership with DCAP Spectrum

© 2024 I-COM SOLUTIONS LLC

Implementing fundamental principles of modern cybersecurity

Least Privileges
The principle of granting users only the minimum privileges necessary to perform their work tasks.

Data-Centric Security
Protection of siloed data, including its discovery and categorisation, and the construction of behavioural models.

Zero Trust
Dynamic reassessment of user or device access rights each time they request access to any resource.

People-Centric Security
Proactive detection of violations, enhancement of individual accountability among staff, and transparent activity auditing and control.

Phase 1

Development of the core functionality of the software product.

Development of the primary methodology for working on the core functionality of the modules for product managers.

Gathering market requirements for the current and next phases of product development.

Database connectors (Postgres SQL, MS SQL, etc.)

Collection of information on structure and metadata

Collection of access rights information

Access rights modification mechanism

Collection of event information

Core ABS system connectors (Diasoft)

Collection of information on structure and metadata

Access rights

Access rights modification mechanism

Collection of event information

Display of observed structure and metadata

Display of access rights

Planning of access rights changes

Display of events
